

# SAMPLE PACKAGE

## ISO 9001 QMS Policies, Procedures & Forms

ABR211

**This Sample Package contains:**

- Part A: Overview of the Sample Package (1 page)
- Part B: Abridged Table of Contents (5 pages)
- Part C: Policy, procedures and form set (6 pages)

## **A: Overview of the Sample Package**

Thank you for viewing this sample content from the **ISO 9001 QMS Policies, Procedures & Forms**.

The following 5 pages contain an abridged version of the Table of Contents, with key sections shown in full detail and supporting sections listed as Tab Headings only.

Following the Table of Contents is a complete policy, procedures and form(s) set from this manual. This policy for ***Pre-production Quality Planning*** exemplifies the content, writing style and format of the full manual. The ***Pre-production Quality Planning Policy*** is located in the manual under Tab 4: QMS Quality Procedures.

### **TERMS AND DEFINITIONS**

**Manual:** A system of approved policy statements and corresponding procedural guidelines and supporting forms that direct an organization toward its operational goals.

**Policy:** A stated course of action with a defined purpose and scope to guide decision making under a given set of circumstances within the framework of corporate objectives, goals and management philosophies.

**Procedure:** A series of prescribed steps followed in a definite regular order which ensure adherence to the guidelines set forth in the Policy to which the Procedure applies

**Activity:** An action, element or decision representing a prescribed step in the Procedure process.

**Task:** A detailed component of an Activity specifying required behavior to complete the activity.

**Form:** A pre-formatted document containing instructions and place-holders for data entry to monitor progress through a particular Procedure and to ensure proper recordkeeping.

### **ISO 9001 QMS MANUAL vs. BUSINESS SAMPLER**

## TABLE OF CONTENTS

<b>Introduction.....</b>	<b>Tab 1</b>
<b>Manual Preparation.....</b>	<b>Tab 2</b>
<b>Quality Manual.....</b>	<b>Tab 3</b>
<b>QMS9001 Procedures.....</b>	<b>Tab 4</b>

Sample prewritten policy and procedure statements are provided as examples of the minimum set of ISO 9001:2000 based policies and procedures used by other companies. These samples can be used to generate ideas or to model policy and procedures for your own ISO 9000 program.

Modifications are needed, as appropriate and as necessary, to ensure they accurately reflect your company's quality assurance system.

### QMS 9001 Procedures Table of Contents

QP1000 - DOCUMENT CONTROL
1.0 Document Distribution
2.0 Document Revision
3.0 Procedure and Work Instruction Format
4.0 Temporary Changes
QP1000-1 Request for Document Change (RDC)
QP1000-2 Document Change Control
QP1010 - QUALITY RECORDS
1.0 Identification of Quality Records
2.0 Record Generation
3.0 Record Maintenance
QP1010-1 Quality Records
QP1020 - MANAGEMENT RESPONSIBILITY
1.0 Planning 2.0 Management Representative
3.0 Responsibilities and Authorities
4.0 Management Review
QP1030 - JOB DESCRIPTIONS

- 1.0 Preparation
- 2.0 Format and Content QP1030-1  
Job Description Format
- QP1040 - COMPETENCE, AWARENESS AND TRAINING
  - 1.0 New employee selection 2.0 New Employee Orientation
- QP1050 - QUOTATION PROCESS
  - 1.0 Standard Products
  - 2.0 Custom or modified products and services
- QP1060 - SALES ORDERS
  - 1.0 Sales Representatives
  - 2.0 Customer Service
  - 3.0 Credit Department
  - 4.0 Internet Orders
  - 5.0 Changes to orders.
- QP1070 - CUSTOMER COMPLAINTS
  - 1.0 General
  - 2.0 Receiving a Contact/ customer Complaint
  - 3.0 Trouble Shooting/Problem Diagnosis
  - 4.0 Repairs and/or Replacements:
  - 5.0 Trend Analysis QP1070-1 Customer Service Log QP1070-2 Customer Service Contact Form
- QP1080 - RETURNED GOODS AUTHORIZATION
  - 1.0 Origination
  - 2.0 Receiving Goods and Processing  
QP1080-1 Returned Goods Authorization
- QP1090 - WARRANTY AND SERVICE POLICIES
  - 1.0 Warranty Coverage 2.0 Service Programs
  - 3.0 Parts Pricing QP1090-1 Limited Warranty
- QP1100 - DESIGN AND DEVELOPMENT 1.0 New Product Initiation
  - 2.0 Design and Development Inputs 3.0 Design Planning 4.0 Product Development
  - 5.0 Design and Development Output 6.0 Design Review and Verification

## 7.0 Design Validation

QP1100-1 Design Completion Checklist For Electromechanical Devices

QP1100-2 Design Completion Checklist For Non-Electromechanical Devices

QP1100-3 Request For Engineering Action (REA)

## QP1110 - DESIGN CHANGE

1.0 Request for Design and/or Process Changes

2.0 Engineering Change Notice

QP1110-1 Engineering Change Notice (ECN)

## QP 1120 - PRE-PRODUCTION QUALITY AND PLANNING 1.0

Design Completion

2.0 Design Transfer and Documentation

3.0 Production Plan

QP1120-1 Product Design Release Form

## QP1130 - SUPPLIER EVALUATION

1.0 Vendor classification

2.0 Vendor evaluation

3.0 Vendor Files

QP1130-1 New Vendor Notification

QP1130-2 Vendor Survey Form

## QP1140 - PURCHASING

1.0 Order Determination and Requisition

2.0 Order Placement

3.0 Record keeping and Matching

QP1140-1 Purchase Requisition QP 1140-2

Purchase Order QP 1140-3 Purchase Order

Log QP1140-4 Purchase Order Follow-Up

## QP1150 - RECEIVING AND INSPECTION 1.0

Receiving

2.0 Inspection

3.0 Stocking

4.0 Rejection, Discrepancies and Disposition

QP1150-1 Receiving Log QP1150-2 Receiving And

Inspection Report

## QP1160 - SCHEDULING

1.0 Production Planning 2.0

Work Order Packets

## QP 1170 - MANUFACTURING

- 1.0 Kitting Work Orders
- 2.0 Production
- 3.0 Final Inspection
- 4.0 Packaging and Labeling
- 5.0 Final Release

#### QP1180 - PART NUMBER ASSIGNMENT

- 1.0 Number Designation
- 2.0 Part Number Assignment/Record Keeping 3.0  
Classification System

#### QP1190 - SERIAL NUMBER DESIGNATION

- 1.0 Serial Numbering
  - QP1200 - PRODUCT LABELING 1.0 Label Control
- 2.0 Identification Labels
- 3.0 Safety Hazard Labels

#### QP1210 - CUSTOMER PROPERTY

- 1.0 Receipt, Inspection and Stocking of Customer Supplied Items
- 2.0 Unsuitable or Missing Items
- 3.0 Customer Supplied Tooling and Fixtures
- 4.0 Intellectual Property

##### QP1210-1 Material Return Notice

#### QP1220 - CONTROL OF MONITORING AND MEASURING DEVICES

- 1.0 General requirements
- 2.0 Storage, Handling and Maintenance
- 3.0 Calibration System
- 4.0 Inspection of Special Tooling
- 5.0 Out-of-tolerance Conditions
- 6.0 Control of Subcontractor Calibration
- 7.0 Test Software

##### QP1220-1 Calibration Record

#### QP1230 - CUSTOMER SATISFACTION

- 1.0 General
- 2.0 Post-Sale Follow-Up
- 3.0 Customer Survey
- 4.0 Post-Service Follow-Up QP1230-  
1 Post Sale Satisfaction Report QP1230-2  
Customer Satisfaction Survey QP1230-3  
Customer Satisfaction Report

#### QP1240 - INTERNAL QUALITY AUDITS

- 1.0 Audit Guide
- 2.0 Audit Process
- 3.0 Corrective Action
- 4.0 Audit Records
- QP1240-1 Quality Assurance Audit Checklist
- QP1250 - MONITORING AND MEASUREMENT OF PROCESSES
  - 1.0 Effectiveness Criteria
  - 2.0 Reporting
  - 3.0 Improvement
  - 4.0 Review
- QP1260- CONTROL OF NONCONFORMING PRODUCT
  - 1.0 Identification and Segregation
  - 2.0 Nonconformance Report
  - 3.0 Returned Goods
  - 4.0 Disposition
  - 5.0 Corrective Action QP1260-1
  - Nonconformance Report
- QP1270 - DATA ANALYSIS AND CONTINUAL IMPROVEMENT
  - 1.0 Data collection
  - 2.0 Data analysis
  - 3.0 Continual Improvement
- QP1280 - CORRECTIVE ACTION
  - 1.0 Initiating a Corrective Action
  - 2.0 Investigating the Cause
  - 3.0 Taking Corrective Action
  - 4.0 Preventing Recurrence
  - 5.0 Verification and Closure
  - QP1280-1 Corrective Action Request
- QP1290 - PREVENTIVE ACTION
  - 1.0 Product Design
  - 2.0 Process Design
  - 3.0 Preventive Actions from Data Analysis

Effective Date: \_\_\_\_\_

Approved by:

**TITLE: QP1120 - Pre-Production Quality and Planning**

**Purpose:** It is the policy of the company that programs and procedures will be developed and continually maintained and redefined for assuring that appropriate pre-production activities are correctly performed that will result in the orderly development and transfer into production of a new or modified product.

This procedure outlines the steps, planning and reviews for implementing the orderly transfer of a new or modified product upon completion of its design phase into full-scale production.

**Scope:** This procedure applies to all departments and individuals involved with the development and release of a new or modified product prior to full-scale production.

**Definitions:** Intrinsic quality is the inherent quality designed into a product and the associated manufacturing processes.

Achieved quality is assured through procedures for orderly transfer of the design information into the production department followed by controlled manufacturing of the product.

**Responsibilities:**

Design and development is responsible for overseeing the release of the product design including completing all forms and documentation as identified in this procedure.

Quality Assurance ensures that all product specifications have been met as required.

Manufacturing is responsible for producing the product to specifications in a timely and cost efficient manner by providing input and feedback as requested in this procedure before the product is released.

**Procedure:**

### 1.0 Design Completion

- 1.1 Upon completion of the Design and Development Validation phase, the product is ready to transition to manufacturing.
- 1.2 Upon completion of the design phase, any changes, modifications or corrections made to the product or existing documentation must adhere to proper document change and design change procedures. See Quality Procedures: QP1110 - DESIGN CHANGE and QP1000 - DOCUMENT CONTROL.

### 2.0 Design Transfer and Documentation

- 2.1 During design reviews and the verification and validation phases of design and development, Quality Assurance and Manufacturing give consideration to the orderly transfer of the product into production.

2.2 Pre-production quality planning by this team must include consideration of all significant aspects of the product, the manufacture of it, and its ultimate use. Reviews should be performed to make certain that the following two goals are fully met:

- The quality objectives and requirements for the product are clearly defined in product and/or processes specifications.
- The processes are capable of achieving the quality objectives.

If a product design is not adequately translated into correct specifications as needed to procure components and manufacture finished devices, the resulting product may be unsafe, ineffective and/or unreliable. Therefore, a complete and adequate product and process documentation, including all labeling and data forms, must be drafted and approved before full-scale production and before commercial distribution of the product.

### **3.0 Production Plan**

3.1 Production processes should be planned, developed, validated and documented to assure they will routinely achieve the intrinsic level of quality designed into the new or modified product.

3.2 Process validation where the resulting output cannot be verified by subsequent inspection is particularly important, especially in processes where deficiencies become apparent only after the product is in use. Process validation demonstrates the ability of the process to achieve the planned results. Validation includes defined criteria for review and approval of the process:

- Approval of equipment
- Qualification of personnel
- Use of specific methods and procedures
- Specific records to be maintained
- Revalidation requirements

3.3 The adequacy of present facilities and equipment or requirements for additional space and/or equipment for manufacturing the product should be determined in conjunction with the anticipated production rate or volume. Included in this determination should be the facilities used in, and equipment used for:

- Environmental Control
- Assembly or Manufacturing
- Inspection
- Testing
- Labeling Control
- Component or Product Handling
- Packaging and Shipping

3.4 Manufacturing, customer, or vendor problems associated with previous product designs should be analyzed to eliminate or reduce similar problems in new or modified products.

- 3.5 As discussed above, the product, and as appropriate, the packaging must be defined in terms of desired attributes, such as physical and performance characteristics. These attributes must then be translated into written product specifications, as discussed, and manufacturing specifications to assure that the finished product conforms to the approved design.
- 3.6 Acceptable ranges or limits must be established for each attribute. The validity of the acceptance specifications should be verified through testing and challenge of the product, packaging and manufacturing processes during their development and later during pilot-production.
- 3.7 The manufacturing processes and equipment and inspection and testing processes and equipment should be designed and/or selected so that in-process and finished product specifications are consistently achieved. This selection should be done with the participation of all appropriate groups that are concerned with assuring a quality device (e.g., Engineering, Production and Quality Assurance). The next step is to arrange, obtain and install and qualify equipment and tooling for the processes.
- 3.8 Process Failure Mode and Effects Analysis (FMEA) (see procedure QP1100DESIGN AND DEVELOPMENT for the definition of FMEA) should be used to identify potential process problems that could result in product nonconformities (see procedure QP1290 - PREVENTIVE ACTION).
- 3.9 After process equipment is designed or selected, it should be reviewed, calibrated, evaluated and tested to verify that it is capable of operating satisfactorily within the operating limits required by process specifications.
- 3.10 Information obtained from qualification studies of process equipment and ancillary systems should be documented and used to:
- Establish written equipment calibration and maintenance procedures
  - Establish manufacturing procedures for the monitoring, operation and control of the equipment including the minimum number of operators
  - Establish any needed environmental controls and procedures
  - Ensure that the work area has sufficient space to perform the processing and associated activities.
- 3.11 The production planning process should also include development of programs to train personnel as required to produce the new or modified product. One very valuable training technique is to require manufacturing personnel assist engineering in assembling and evaluating prototypes. This technique:
- Achieves advance training for manufacturing personnel
  - Reduces production problems by improving the producibility of the product based on the expertise and input of the manufacturing personnel
  - Improves communications and technology transfer between the various departments
- 3.12 The evaluation of a new product and its associated manufacturing processes should usually include pilot production of a few units. Pilot production is recommended as it helps debug the product design and overall production

program. Thus, pilot production should be planned so that manufacturing activities are monitored, problems are discovered and resolved and documentation is updated.

3.13 As part of the quality assurance program for new or modified products, final prototypes or pilot-production models must be evaluated by the product development group to determine that the product conforms to specifications. A QP1120-1 Product Design Release form should be completed and all evaluation data and associated records should be submitted to the design review group for review.

3.14 Any discrepancies in the finished products versus the specification and other elements of the design and development, or quality objectives must be resolved before the product is released for full-scale production. If pilot models are to be commercially distributed, the pilot units must meet master record requirements and be approved for release. Pilot models may be used internally for technical writers or in training programs for production and service personnel or as marketing displays as an alternate.

Effectiveness Criteria:

- Smoothness of transition
- Overall process yield
- Conformance to Project Schedule
